

MaharajJi MaharajJi - Product Requirements Document (PRD)

Version 1.0 · Confidential

1. Overview

1.1 Product Summary

MaharajJi is a mobile application (iOS & Android) designed for a spiritual community. It enables devotees to discover, book, and manage seats at spiritual gatherings (satsangs, kirtans, discourses). Administrators manage the publishing and oversight of these sessions.

1.2 Problem Statement

Currently, devotees must manually contact organizers (via phone/WhatsApp) to reserve their spot at spiritual sessions. This leads to: - Overbooking and confusion - No visibility into available slots - No records of past attendances - High manual overhead for administrators

1.3 Solution

A token-based booking system where: - Admins publish sessions with a defined number of tokens and people-per-token. - Devotees self-serve by booking a token during a defined booking window. - Both sides have full visibility into bookings, history, and capacity.

2. Users & Roles

Role	Description	Entry
Devotee (User)	Any community member who attends sessions	Phone login OTP
Admin	Organizers who create and manage sessions	Phone 1212121212 OTP

3. Core Concepts

Term	Definition
------	------------

Session	A single spiritual gathering event (e.g., Evening Satsang on 15 June)
Token	A booking unit. One token = one family/group entry
Max People per Token	How many people can be in a single token group
Booking Window	The time period during which users can book (e.g., 9:00 AM - 10:00 AM the day before)
Slot	An available token in a session

4. App Flow

4.1 Authentication Flow (Both Roles)

Enter 10-digit Phone Number

Tap "Continue"

OTP sent to phone (6-digit)

Enter OTP Verify

User Home Admin Dashboard

- OTP expires and can be resent after 30 seconds.
- Admin is identified automatically by phone number on the backend.
- JWT token + refresh token stored securely (Keychain).

4.2 User Flow

[Home Screen]

Sessions AVAILABLE Browse session cards

Tap "Reserve" on a session

[Book Session Screen]

Select number of people (1 to max)

Tap "Confirm Booking"

[Booking Successful Screen]
Shows Token#, Date, People, Location

Tap "View My Bookings"

[My Bookings Tab]
Active bookings with token details
Cancel booking (confirmation modal)
Past bookings history

[History Tab]
Full list of completed/cancelled bookings

[Profile Tab]
Name, phone, logout

4.3 Admin Flow

[Admin Dashboard]

[Manage Bookings Tab]

Search & filter sessions (Active / Archive)

View session [Session Attendees List]
Shows all bookings, token numbers, people count

Edit session [Create/Edit Session Screen]

Delete/Cancel session (confirmation modal)

[+ FAB] [Create New Session Screen]

Fill session details
Select multiple dates
Configure per-date tokens & capacity

Tap "Publish Session"

Creates one session per selected date

[Manage Customers Tab]
Browse all registered devotees
Search by name or phone
[+ FAB] Add new customer manually

[Settings Tab]
Admin profile, role, logout

5. Feature Requirements

5.1 Authentication

#	Requirement	Priority
A1	User enters 10-digit Indian phone number	Must Have

A2	OTP sent via SMS, 6 digits	Must Have
A3	OTP resend after 30-second countdown	Must Have
A4	Admin auto-detected by phone number	Must Have
A5	JWT authentication with secure refresh	Must Have
A6	Truecaller auto-fill (where available)	Nice to Have

5.2 User - Home & Session Discovery

#	Requirement	Priority
U1	Show live sessions (booking window open now)	Must Have
U2	Show upcoming sessions (booking window not yet open)	Must Have
U3	Display slots remaining per session	Must Have
U4	Show session image, title, date, time, location	Must Have
U5	Empty state with "Notify Me" when no sessions	Should Have
U6	Pull-to-refresh sessions list	Should Have

5.3 User - Booking

Updated Flow: Because sessions can span multiple dates (multi-date publish), the booking screen now walks the user through 3 steps in sequence.

New Booking Steps:

[Tap "Reserve" on a Session]

Step 1 - Select a Date
List of available session dates for this event
User picks one date

Step 2 - Select Number of People
Stepper: 1 to max people per token for that date

Step 3 - Confirm Booking
Summary: Date, Token Capacity, People selected
Tap "Confirm"

[Booking Successful Screen]

#	Requirement	Priority
B1	User sees a list of available dates for the selected session	Must Have
B2	User selects one date from the list of available session dates	Must Have
B3	User selects number of people (1 to max per token for that date)	Must Have
B4	Booking only allowed within the booking window for that date	Must Have
B5	Auto-assign token number on confirmation	Must Have
B6	Booking success screen with token details (token#, date, people, location)	Must Have

B7	Back navigation disabled on booking success	Must Have
B8	Error shown if no slots remaining for selected date	Must Have
B9	Dates with no remaining slots shown as disabled/greyed out in date list	Must Have
B10	One active booking per date per user (cannot double-book the same date)	Must Have

5.4 User - Booking Management

#	Requirement	Priority
M1	View active bookings with token number, date, people	Must Have
M2	Cancel active booking with confirmation	Must Have
M3	View history of past and cancelled bookings	Must Have
M4	Paginated history list	Should Have
M5	Success message after cancellation	Must Have

5.5 Admin - Session Management

#	Requirement	Priority
S1	Create a new session with title, date, location	Must Have
S2	Set total number of tokens per session	Must Have
S3	Set max people per token	Must Have
S4	Set booking open date and time	Must Have
S5	Set booking close time (min 1 hour after open)	Must Have
S6	Edit existing sessions	Must Have
S7	Cancel/delete a session	Must Have
S8	Filter sessions by Active / Archive	Must Have
S9	Search sessions by title	Must Have
S10	Booking open date auto-set to 1 day before session	Should Have

5.6 Admin - Multi-Date Session Publish (*New Feature*)

#	Requirement	Priority
---	-------------	----------

MD1	Admin can select multiple dates from a calendar in one go	Must Have
MD2	Each selected date gets its own DateConfigCard	Must Have
MD3	Per date: set Total Tokens (min 1, default 25)	Must Have
MD4	Per date: set Max People per Token (min 1, default 4)	Must Have
MD5	Auto-calculate and display Total Capacity per date (Tokens × Per Token)	Must Have
MD6	Remove a specific date from selection via [X] on DateConfigCard	Must Have
MD7	Cannot deselect the last remaining date	Must Have
MD8	Publishing creates one session record per selected date	Must Have
MD9	Booking window (open/close time) is shared across all selected dates	Must Have
MD10	Past dates are disabled and not selectable on calendar	Must Have
MD11	Empty state shown in "Selected Dates" section when no dates picked	Should Have

5.7 Admin - Attendee Management

#	Requirement	Priority
AT1	View all bookings for a specific session	Must Have
AT2	Show token number, customer name, phone, people count	Must Have
AT3	Show filled tokens vs total tokens summary	Must Have
AT4	Search attendees by name within a session	Should Have

5.8 Admin - Customer Management

#	Requirement	Priority
C1	View list of all registered customers	Must Have
C2	Search customers by name or phone	Must Have
C3	Manually add a new customer (name, phone, location)	Must Have
C4	View customer's booking history	Nice to Have

5.9 User - Profile & Settings

#	Requirement	Priority
P1	View profile: name and phone number	Must Have
P2	Logout with confirmation modal	Must Have
P3	Language selector - switch between English and Hindi	Must Have
P4	Theme selector - Light / Dark / System default	Should Have
P5	Feedback / Report - submit feedback or report an issue	Should Have
P6	App version info display	Nice to Have
P7	Privacy Policy link	Nice to Have

5.10 Admin - Settings

#	Requirement	Priority
AS1	View admin profile: name, phone, role	Must Have
AS2	Logout with confirmation modal	Must Have

AS3	Language selector - switch between English and Hindi	Must Have
AS4	Theme selector - Light / Dark / System default	Should Have
AS5	Feedback / Report - submit feedback or report an issue	Should Have
AS6	App version info display	Nice to Have

6. Non-Functional Requirements

Category	Requirement
Performance	Session list loads within 2 seconds on 4G
Offline	Show cached data with "offline" indicator; block booking actions
Security	Auth tokens stored in Keychain; never in local storage
Scalability	Paginated APIs for sessions, bookings, customers
Localization	English (primary) + Hindi (secondary)
Accessibility	All interactive elements labelled; min 44×44dp tap targets
Platform	iOS 14+ and Android 9+

7. Notifications

#	Requirement	Priority
N1	Push notification when booking is confirmed	Must Have
N2	Push notification reminder 1 day before session date	Must Have
N3	Push notification when booking is cancelled	Must Have
N4	Push notification when a new session is published (for subscribed users)	Must Have
N5	In-app notification bell with unread count badge	Should Have
N6	Notification preferences (user can opt in/out per type)	Nice to Have

8. Future Scope (Good to Have - Post v1.0)

These are planned features not included in v1.0 but valuable for future releases:

Feature	Notes
QR code check-in	Admin scans user QR at entry gate

Recurring/repeating sessions	Auto-schedule weekly or monthly sessions
Multi-admin / permission levels	Super Admin, Location Admin, Volunteer roles
In-app chat or announcements	Admin broadcasts messages to all devotees
Attendance tracking	Mark tokens as present/absent on the day
Waitlist	If session is full, user can join waitlist and auto-book if slot opens
Donation / Seva collection	Optional payment flow tied to booking
Analytics dashboard	Graphs for bookings, attendance trends, peak sessions
Volunteer management	Assign volunteers to sessions

9. Strictly Out of Scope (v1.0)

- Any payment gateway integration
- Third-party calendar sync (Google/Apple Calendar)
- Live video streaming of sessions
- Social sharing features

10. Success Metrics

Metric	Target
Booking completion rate	> 85% of users who tap Reserve complete the booking

Session fill rate	> 70% of tokens filled per session on average
Admin time to publish session	< 2 minutes for a single session
Admin time to publish multi-date sessions	< 3 minutes for 5+ dates
App crash-free rate	> 99.5%
OTP verification success	> 95% on first attempt

11. Technical Summary

Layer	Technology
Mobile	React Native (iOS + Android)
Language	TypeScript (strict)
State	Zustand
API Client	Axios with interceptors
Storage	MMKV (general) · Keychain (tokens)
Navigation	React Navigation v6
UI Components	Atomic Design (atoms molecules organisms templates)

Styling	Styled Components (no inline styles)
Validation	Zod + React Hook Form
Lists	FlashList (Shopify)
Animations	React Native Reanimated v3
